EDUCATION

Universidad Autónoma de Nuevo León

B.S. in Software Technology Engineering

San Nicolás de los Garza, Nuevo León

Expected Dec. 2026

EXPERIENCE

Viakable

Jun. 2025 – Present

Software Engineer Intern

San Nicolás de los Garza, Nuevo León

- Built and deployed 4 interconnected applications for the Compounds area covering batch reporting, quality threshold configuration, approval/rejection workflows with automated manager email notifications, and label printing — in active production use.
- Developed a background validation batch polling every 5 seconds to synchronize two cable reel quality tests, auto-approving or reverting results based on server-side image verification.
- Developed and maintained 6+ web applications across Quality, Production Floor, and Operations using Progress 4GL and WebSpeed on Unix and Windows environments, including redesigns and legacy system modifications.
- Contributed to an automated image upload workflow for plant operators using PHP, replacing a fully manual process with a streamlined web-based tool.

PROJECTS

Meeti | *Next.js, TypeScript, Drizzle ORM, AI SDK, Pusher, Redis*

Jun. 2026 – Present

- Building a full-stack club and event management platform using Next.js App Router with Server Components, Server Actions, and Typed Routes.
- Integrated Vercel AI SDK to embed an AI assistant with tool-calling capabilities that queries the database and returns formatted responses in real time.
- Implemented real-time notifications via Pusher WebSockets and full authentication (registration, sessions, route protection, session revocation) with Better Auth.
- Applied Feature-Based Architecture for scalable domain-driven organization; added Redis for rate limiting and UploadThing for file management.

ProfeScore | *React, TypeScript, Node.js, Express, MongoDB, JWT*

Mar. 2025 – May 2025

- Built an anonymous professor rating platform that reached 2,000 users at launch, allowing students to rate faculty on 5 quantitative metrics and qualitative comments.
- Designed an admin panel for academic data management and optimized data fetching with React Query, reducing perceived load time.

UpTask | *React, TypeScript, Node.js, Express, MongoDB, React Query*

Dec. 2024 – Feb. 2025

- Developed a full-stack project management platform with role-based access control, limiting actions to authorized users per project.
- Built a REST API with account confirmation and password recovery flows via SMTP (Nodemailer), ensuring secure and reliable email deliverability.
- Implemented 100% data segregation across user projects using ObjectId-referenced queries with Mongoose.

SKILLS

Languages: Progress 4GL/ABL, JavaScript, TypeScript, Python, SQL (PostgreSQL), HTML/CSS, PHP

Frameworks & Libraries: React, Next.js, Node.js, Express, React Query, Drizzle ORM, Tailwind CSS, shadcn/ui

Databases: MongoDB, PostgreSQL

Developer Tools: Git, GitHub Actions, Vercel, WebSpeed, Unix/Linux, Windows Server, VS Code, Putty, FileZilla

Achievements: Participant at HackMTY (Expected Sept. 2026) & Rally de Ciencias Computacionales UANL (Sept. 2025)

Certifications: CS50's Intro to Computer Science (Harvard), React & TypeScript Guide (Udemy), Python for Data Science & ML (Udemy)
